What Are Wise Foods?

WISE Foods are an innovative approach to long-term food storage. The meals are freeze-dried or dehydrated then nitrogen packed to ensure long lasting flavor, maintain original texture, have high nutritional content, compact, and have long storage life.

Easy to Store

The best part of WISE foods is that they have a 25-year shelf life and don't need to be rotated! WISE buckets are also lightweight, stackable, plastic containers packages, keeping your investment safe from the elements.

Easy to Prepare

Each package of WISE food contains 4 servings for convenient preparation. Simply add 1 quart of boiling water, let sit, and enjoy. Dried fruits and granolas are ready to eat.

Easy to Eat

WISE meals are just delicious! At REST Assured we care about nutrition and taste. We tested several meals before deciding that WISE foods were our favorite.

These meals are high in calories (a plus when storing), full in excellent flavor and provide great variety. In each Grab and Go Bucket there are around 10 different meals—preventing boredom later.

Not Your Grandpa's MREs

What Are MREs?

MREs are Meals Ready to Eat. These originated as compacted meals for soldiers. They have extremely high calorie contents and can be eaten hot or cold — no water needed. Truly Ready to Eat.

Are These Actually Edible?

YES! MRE-STAR MREs are specifically made for civilians and are, well, not your grandpa's MREs. These meals are prepared with top quality ingredients to guarantee they have the best quality and flavor. They have also been further tested *and approved* by REST Assured.

So Why Chose MRE-STAR?

MREs provide safe and proven outdoor or emergency food supplies. The MRE-STAR MREs are complete meals in a single package. Each box contains 12 meals, each including an entrée, dried fruit, trail mix, desert, and a drink mix.

How Should I Prepare?

We recommend buying a mixture of MRE-STAR ready to eat meals and Wise Foods freeze dried meals. Freeze dried goods will enable greater food storage capacity while ready to eat meals will provide a healthy food supply when water is limited. Diversity is the key to long term food storage and adequate preparedness.
